1. Evaluate the following Legendre symbols:

- (a)  $\left(\frac{71}{73}\right)$ ;
- (b)  $\left(\frac{29}{541}\right)$ ;
- (c)  $\left(\frac{3658}{12703}\right)$  (Hint:  $3658 = 2 \cdot 31 \cdot 39$ ).

2. Solve the quadratic congruence  $x^2 \equiv 11 \pmod{35}$ . (Hint: After solving  $x^2 \equiv 11 \pmod{5}$  and  $x^2 \equiv 11 \pmod{7}$ , use Chinese Remainder Theorem).

3. Solve each of the following quadratic congruences:

- (a)  $x^2 \equiv 7 \pmod{3^3}$ ;
- (b)  $x^2 \equiv 14 \pmod{5^3}$ .

4. Let  $a$  and  $b$  be relatively prime integers with  $b > 1$  odd. If  $b = p_1 p_2 \dots p_r$  is a decomposition of  $b$  into odd primes (not necessarily distinct), then the *Jacobi symbol* is defined by  $\left(\frac{a}{b}\right) = \left(\frac{a}{p_1}\right) \left(\frac{a}{p_2}\right) \dots \left(\frac{a}{p_r}\right)$ , where the symbols on the right-hand side of the equality sign are Legendre symbols.

- (a) Evaluate the Jacobi symbol  $\left(\frac{21}{221}\right)$ .
- (b) Show that if  $a$  is a quadratic residue mod  $b$  then  $\left(\frac{a}{b}\right) = 1$ , but that the converse is false.
- (c) Let  $a, b, a', b'$  be integers with  $(aa', bb') = 1$ . Prove that

$$\left(\frac{aa'}{b}\right) = \left(\frac{a}{b}\right) \cdot \left(\frac{a'}{b}\right) \text{ and } \left(\frac{a}{bb'}\right) = \left(\frac{a}{b}\right) \cdot \left(\frac{a}{b'}\right).$$

- (d) Prove that  $\left(\frac{a^2}{b}\right) = 1$  and that  $\left(\frac{a}{b^2}\right) = 1$ .
- (e) Prove that  $\left(\frac{-1}{b}\right) = (-1)^{\frac{b-1}{2}}$  (Hint: If  $u$  and  $v$  are odd integers, then  $\frac{u-1}{2} + \frac{v-1}{2} \equiv \frac{uv-1}{2} \pmod{2}$ ).
- (f) Prove the Generalized Quadratic Reciprocity Law: if  $a, b$  are odd integers, each greater than 1, with  $(a, b) = 1$ , then

$$\left(\frac{a}{b}\right) \left(\frac{b}{a}\right) = (-1)^{\frac{a-1}{2} \cdot \frac{b-1}{2}}.$$

(use the same hint as in the previous question)
